

// Hi, I'm

Bashayer Alhawsawi

Mobile Developer · Android & Cross-Platform

I build mobile apps that people actually use — native Android with Kotlin and cross-platform with Flutter, engineered to feel effortless. Based in Saudi Arabia.

How I Became a Mobile Developer

It started with a simple question: how does this actually work?

My journey began at the **Tuwaiq Academy bootcamp**, where I built my first complete application and truly understood the fundamentals of programming. That experience sparked a deep curiosity about how digital products are built.

After graduating, I worked on small projects that strengthened my skills and gave me real experience solving practical problems through code.

My first professional role introduced me to **Flutter**, where I spent a year and a half building cross-platform mobile applications and exploring a new side of mobile development.

Later, I returned to my foundation: **Kotlin**. Since then I've been continuously refining my Android expertise, improving my architecture skills, and building applications that are reliable, scalable, and designed to last.

THE PROBLEMS I LOVE TO SOLVE

★ Real-Time or Nothing

Systems where a 500ms delay costs someone a ride or a sale. Zero tolerance for lag.

★ Architecture Built to Last

Code that survives the next developer and the next thousand users.

★ Effortless in Complexity

When the problem is hard but the solution feels natural.

★ Performance Under Pressure

Apps that stay fast when the real world hits them.

TOOLS I TRUST

Kotlin

Coroutines, Flow, Jetpack Compose, MVVM, Room, Retrofit — native Android from architecture to animation.

Flutter

Cross-platform UI at speed. Bloc/Provider state management, custom animations, native feel on both platforms.

Clean Architecture

Domain, Data and Presentation layers. Testable, maintainable, built to survive the next developer.

Maps SDK

Live tracking, geofencing, route calculation, custom overlays — real-time location at production scale.

STACK & SERVICES

Firebase · Google Maps · Jetpack Compose · Room · Retrofit · Kotlin Multiplatform · Git

My Projects

Projects that left an impression — and there's more.

Ma'an Initiative

01 / Web

WEB PLATFORM • HEALTHCARE EDUCATION

Under the Ma'an Initiative, I built a web platform serving the healthcare education sector — a responsive, accessible site delivering educational content to its audience.

★ Live platform • Healthcare education sector

Minute — Driver App

02 / Mobile

REAL-TIME RIDE-HAILING

Drivers needed real-time reliability. I built a production-grade app with Google Maps, live ride handling, and earnings tracking — performance-first, always.

Minute — Client App

03 / Mobile

PRODUCTION-READY PASSENGER APP

A ride-hailing app that lets users request trips, track drivers live, and reach destinations safely and quickly — with intuitive booking flows, push notifications, and a UX people trust.

03 · LET'S TALK

If you're building something ambitious, let's talk.

Available for new challenges. I take on selective work, which means what we build gets my full attention. Typically replies within 24 hours — no automated responses, you'll get me.
